
Soundiron Lakeside Pipe Organ

Kronos EXs Installation Guide And Preset List

About

The Lakeside Pipe Organ is a vintage steel and wooden pipe organ recorded with master organist Don Sears at the Lakeside Temple of Practical Christianity in Oakland, California. This large pipe organ produces its sound by venting mechanically compressed air (wind) through 850 resonant steel pipes and wooden reeds, arranged in 15 ranks. Each pipe produces sound at one fixed pitch, so they are provided in sets with one pipe or more per note, each set or stop having a common timbre and loudness throughout. The Lakeside Pipe Organ has multiple sets of pipes of differing timbre, pitch and loudness which the player can employ singly or in combination. The actual organ is made from three keyboards and a foot pedal board for bass notes, each of which controls its own group of stops.

This carefully curated and optimized edition for Kronos showcases 6 essential stop settings on the organ, which can be compared to PP, P, MP, MF, FF dynamics and a bass pedal stop. All settings were recorded from 2 wide stereo microphone positions (close and far) for maximum user flexibility. The full range of the pipes covers 61 keys on the console, starting at C2. We've stretched the lowest note down to C-2, to allow extremely deep notes lower than the physical pipes could allow. This library also features an exclusive selection of all-new custom sound-designed FX presets to give you even more creative choices!

This 1.66 GB library includes 3,166 samples, with 12 Pipe Organ presets, 3 Organ Chime presets, 2 Custom Wave Sequences and 65 Custom Designed FX Presets.

Minimum Requirements

Before you load your Soundiron EXs, be sure your Kronos has operating system version 3.0.4 or higher installed.

It is also highly recommended that you save a PCG file of all banks on your Kronos before installing any EXs to avoid accidentally overwriting any of your sounds.

Installing an EXs

The instructions that follow can also be found in the Kronos Parameter Guide in the section titled “*Install an EXs*”. You can download the latest Kronos user documentation here:

<http://www.korg.com/support/download/product/0/424/#manual>

1. If you downloaded the EXs data, un \square zip the downloaded file. Un \square zipping the archive will result in a folder containing several different files.

Note: *Depending on your browser settings, the downloaded file may be unzipped automatically. One of the files in the resulting folder has a name which ends with “tar.gz.” Please do not un \square zip this tar.gz file.*

2. Copy the un \square zipped folder to a USB storage device.
3. Safely disconnect the USB storage device from your computer.
4. Connect the USB storage device to the KRONOS.
5. Go to the **Disk Utility** page.
6. Using the **Drive Select** menu at the bottom of the page, select the USB storage device. You may need to wait a few seconds after connecting the device before it is recognized.
7. Open the folder containing the EXs data from step 2.
8. Select the file whose name ends in **.exsins**. The “exsins” suffix stands for “EXS INStaller.” For instance, an installer file might be named “EXs10.exsins.” When an .exsins file is selected, the Load button changes to read Install. Only one EXs can be installed at a time. If Multiple Select is On, Install will be disabled.
9. Select **Install EXs** from the menu, or press the Install button. The system will check to confirm that the installation files are valid, and that there is sufficient space on the SSD to install the EXs. Next, a dialog box will appear:

Found installer for: [EXs name]

Space required: [nnn] MB
SSD1: [disk name] [nnn] GB available

10. Press **Install** to continue with the installation, or press Cancel to stop without installing. An “are you sure?” message will appear to confirm the installation.

11. Press **OK** to continue with the installation, or press Cancel to stop without installing. The installation will then begin. This may take a while; a progress bar shows the installation as it proceeds. Next, the newly installed files will be verified. After the verification has completed successfully, the progress bar will disappear, and the installation is complete. The EXs sample data itself is installed on an invisible, protected part of the disk. To use the EXs, you’ll load its associated files (.KSC, .PCG etc.). The newly loaded EXs programs will be loaded in a particular bank(s). *To find the location see the documentation for the specific EXs you are loading.*

Using the newly installed EXs:

1. Make sure to back up any sounds before overwriting the sounds that are currently in memory. You may need to free up sample RAM, or use the “Clear” option when loading the .KSC. You can also load specific sounds from the .KSC, make your own subsets of its sounds, and automatically load the new samples at startup. For more information, see the following sections in the Kronos Parameter Guide:

Global “0–3: KSC AutoLoad” on page 762
Global “0–4: Sample Management” on page 765
Disk mode menu command “Load .PCG” on page 829
Disk mode menu command “Load .KSC” on page 838

2. Load the newly installed .PCG and .KSC files.

3. Go to the **Disk Utility** page.

4. Using the **Drive Select** menu at the bottom of the page, select **Internal HD**. You will see a list of folders.

5. Open the folder labeled **Soundiron**. A list of EXs library folders will appear showing any installed EXs libraries.

6. Open the folder containing the EXs you would like to use. You will now see the .KSC & .PCG files for that particular library.

7. Select the .PCG file and tap the Load button. A dialogue box will appear asking if you want to load the .KSC file too. Select the checkbox next to “Load EXs ###.PCG too” and tap the OK button. The EXs will now load.

8. Go to the **Program P0:Play** page by pressing the PROG button on your Kronos.

9. Pressing the BANK U-G button will display the Lakeside Organ EXs programs. All Lakeside Organ banks are located on U-G.

Authorization

If an authorization code is required, the EXs will work in demo mode, fading in and out, until the code is purchased and entered into the KRONOS.
