Clavinet D6

Overview

Each of the four Clavinet D6 pickup settings was sampled at eight velocity levels for full duration, providing an accurate sound with no artificial decay envelopes or sample loops. Release samples are also included. The multi-mode filter within the HD-1 engine was used to simulate the four tone settings yielding all 60 possible tone variations available on the D6.

The library requires 856MB of RAM or 31MB using virtual memory. 87 programs are provided.
