Uninstall EXs

System Version 1.6.0 adds a new "Uninstall EXs" page menu command in the P6: Options info page in Global mode. It will uninstall selected EXs data from the internal hard drive. You can use this command to remove demo mode EXs data, for example, if you need more space on the internal hard drive. This EXs data can then be re-installed at any time.

1. Select the desired EXs option at the Installed Option list in P6: Options Info page in Global mode.
2. Touch "Uninstall EXs" to open the dialog box.
3. Touch "OK" to confirm and execute the Uninstall EXs command, or press the Cancel button to cancel the operation.
4. After uninstalling the EXs data, a confirmation message will appear:

"EXs (number and title) sample data deleted
Related PCG, KSC, etc. may remain; delete manually if desired."

5. Press OK to close this confirmation window.
6. As required, delete remaining folders and files in Disk mode.
